ACKNOWLEDGMENTS

1. The Examiner acknowledges receipt of the following: (1) the preliminary amendment filed 1/5/04 wherein pages 1-89 of the sequence listing were submitted; (2) the preliminary amendment filed 7/18/03 wherein the specification was amended; claims 1-51 were canceled; claims 52, 53, 56, 57, 58, and 67-69 were amended; claims 59-65 were canceled; and claims 70-83 were added.'

Note: Claims 52-58 and 66-83 are pending.

APPLICANT'S INVENTION

2. Applicant's invention is directed to compositions, kits, and uses thereof comprising a peptide/peptidomimetic targeting moiety that binds to the $\alpha_5\beta_1$, a chelator, optionally, a linking group, at least one chemotherapeutic agent or radiosensitizer agent, and a pharmaceutically acceptable carrier.

RESPONSE TO APPLICANT'S ELECTION

3. Applicant's election with traverse of Group I and the species wherein the chemotherapeutic agent is gemcitabine and the radiopharmaceutical (as set forth in Applicant's response filed 10/12/04, page 2), filed 10/12/04, is acknowledged. The traversal is on the ground(s) that the search is not a serious burden to the Examiner even if multiple inventions are present. This is found non-persuasive because a chemotherapeutic agent is different from a radiosensitizing agent. As a result, prior art that anticipates or renders a chemotherapeutic agent obvious would neither anticipate nor render obvious a radiosensitizing agent. Hence, the restriction requirement is still deemed proper and is therefore made FINAL.

Art Unit: 1616

EX PARTE QUAYLE

4. This application is in condition for allowance except for the following formal matters:

Applicant needs to cancel all non-elected subject matter.

Prosecution on the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

A shortened statutory period for reply to this action is set to expire **TWO MONTHS** from the mailing date of this letter.

ALLOWABLE CLAIMS

5. Claims 52-58 and 66-83 are allowable over the prior art (in part) as they are directed to a composition, kit, and method of treating cancer comprising a peptide/peptidomimetic that binds to a $\alpha_5\beta_1$ receptor, a chelator, optionally, a linking group, at least one chemotherapeutic agent or radiosensitizer agent, and a pharmaceutically acceptable carrier. The closest art is Applicant's own work which differs in that it is directed to a non-peptide or a different receptor peptide than that set forth in the instant invention.
